

TOP2017

Braga, Portugal

10th International Workshop on Top Quark Physics

The 10th International Workshop on Top Quark Physics, TOP 2017, will be held in the city of Braga, in Portugal, from September 17th to 22nd. Following the long tradition of the workshop, the communities of experimental and theoretical physicists working on top quark physics are brought together once again.

The 2017 edition of the Workshop will be dedicated to the overview of the most up to date experimental measurements and latest theoretical developments on top quark physics, as well as searches for Physics Beyond the Standard Model that may be linked with top quarks. The Workshop will provide a comprehensive overview on top quark physics within the Standard Model and its potential to probe new physics at different accelerators, from the Run 2 of the Large Hadron Collider (LHC) to future machines.

The programme is composed of plenary presentations, which usually trigger enthusiastic discussions, poster sessions, and two particularly important sessions for the young researchers: the Question and Answers (Q&A), where young scientists can openly interact with more experienced researchers in an informal way, and the Young Scientist Forum, where they have the opportunity to present their own work in short talks. Young scientist researchers are also encouraged to submit posters. The goal of the Workshop is to provide a common forum where experimentalists and theorists can discuss the interpretation of top quark results, hopefully based on the 2015+2016 full dataset collected at LHC, and plan future measurements.

The event will take place at the Bom Jesus venue, in the historical city of Braga, capital of Minho, a region in the North of Portugal. Braga is an ancient town, dating from before the roman times when the region was inhabited by the Bracarus tribe. The roman Emperor Caesar Augustus, after conquering Hispania, renamed it as Bracara Augusta. Braga is also very close to Guimarães, the founding place of Portugal.

We look forward to see you in Braga this September. We expect this beautiful and historical venue to be an appropriate place to celebrate the remarkable milestone of reaching the 10th edition of the Workshop.

Early bird registrations:

April 3rd
